TREND TRACKERS

Ride Booking Data Analysis

Table of contents

01 Dataset Overview

02 Data Cleaning

03 Exploratory Data Analysis (EDA)

04 Data Visualization

05 Statistical Analysis

06 Modeling / Insights

Dataset Overview

Content:

- Total records: (55612, 21)
- Features:
  - Booking ID
  - Vehicle Type
  - Booking Value
  - Ride Distance
  - Ratings
  - VTAT & CTAT

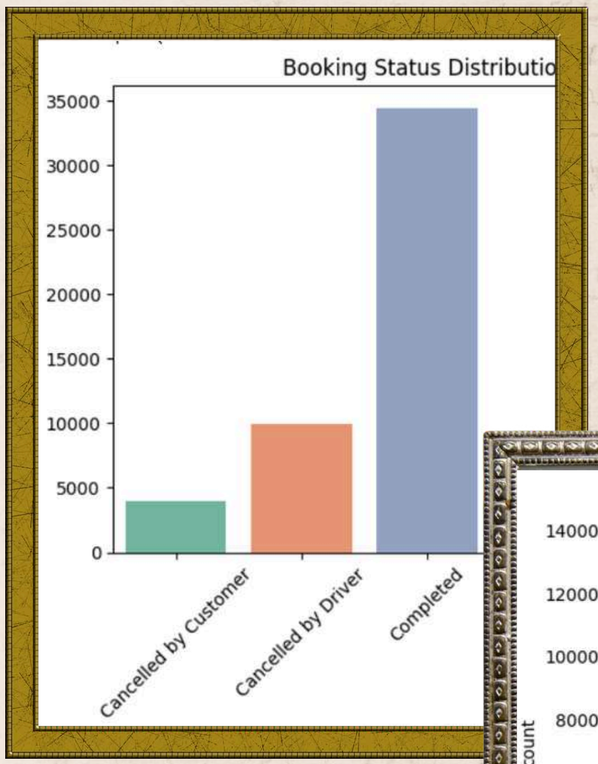
Data Cleaning

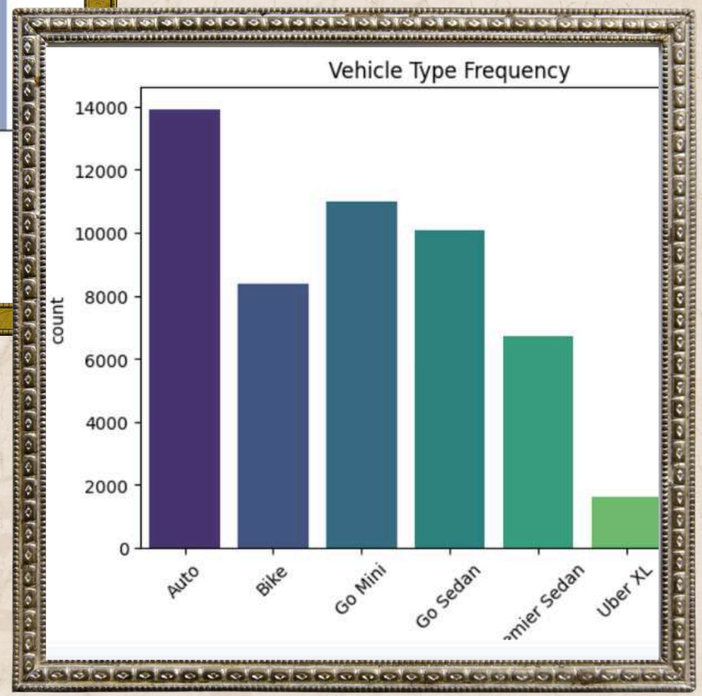
Content:

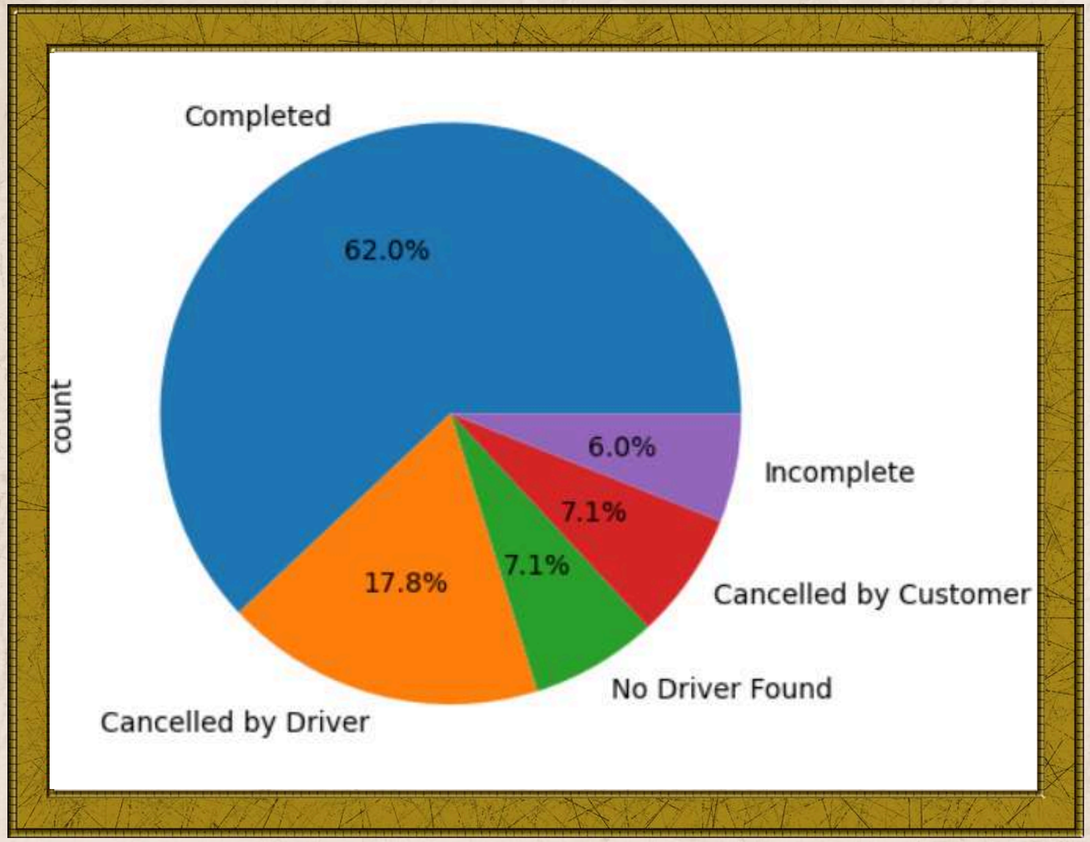
- Removed unnecessary columns
- Handled missing values
- Converted datatypes
- Fixed rating format

Exploratory Data Analysis (EDA)

- Understand data structure
- Identify missing values
- Detect outliers
- Find patterns and trends
- Support decision-making







1. Univariate Analysis
2. Bivariate Analysis
3. Multivariate Analysis

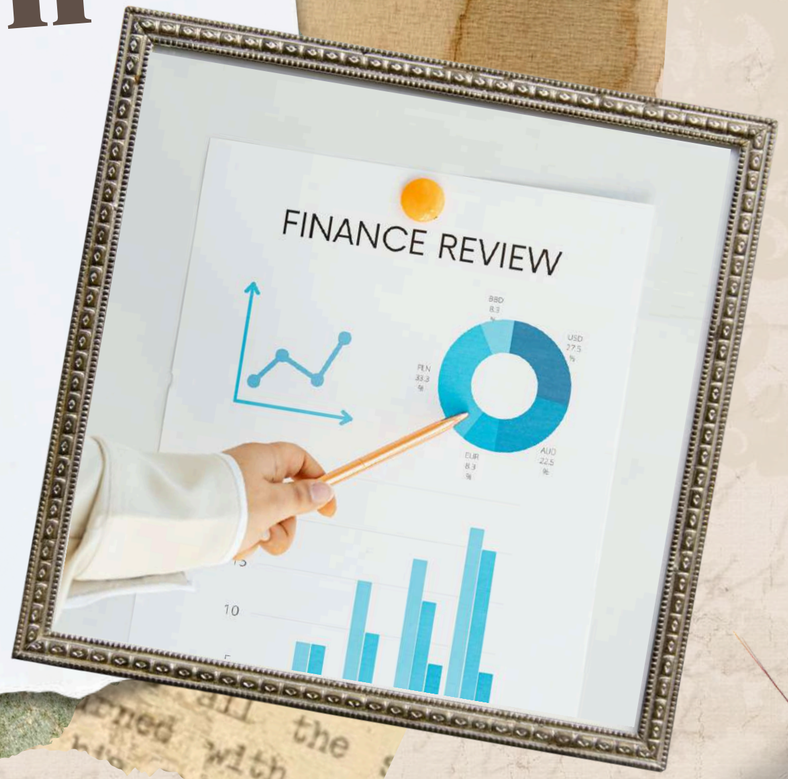
- Correlation analysis
- Grouping and aggregation

Data Visualization

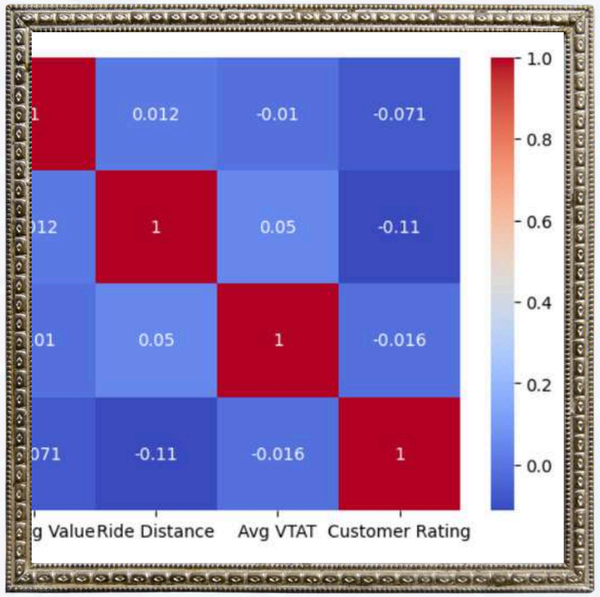
Represent data using graphs

- Bar chart
- Line chart
- Histogram
- Boxplot

Goal: Easy understanding

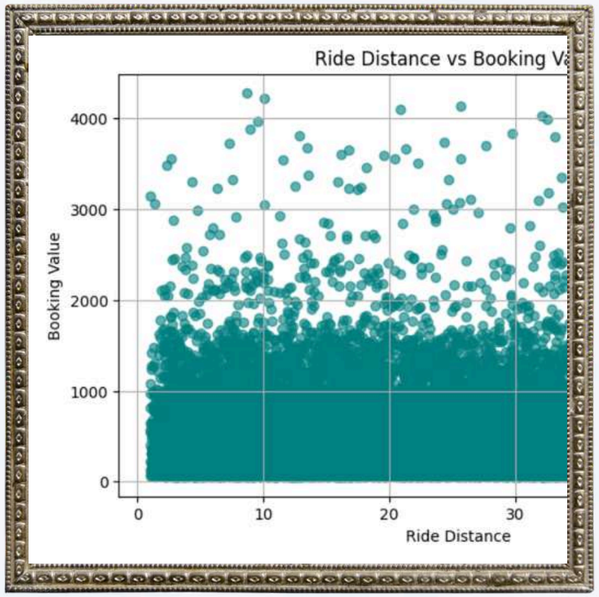


Data Visualization



Correlation Heatmap

- Variables show very weak correlation
- Booking value, distance & rating are mostly independent
- No strong factor affecting customer rating



Ride Distance vs Booking Value

- No clear relationship between distance and price
- Pricing varies widely for all distances
- Indicates dynamic/surge pricing effect

Booking Status Chart

- Most rides are successfully completed
- Auto & Go Mini have highest demand
- Some cancellations & no driver found issues

Ride Booking

BOOKING COMPLETION PERFORMANCE

Most bookings are successfully completed, indicating efficient ride fulfillment and operational stability.

VEHICLE TYPE DEMAND

Customer demand varies across vehicle types, showing preference for specific ride categories.

PAYMENT METHOD PREFERENCE

Digital payment methods are widely preferred, reflecting strong adoption of cashless transactions.

REVENUE HOTSPOTS

Revenue is concentrated in key pickup locations, highlighting major business hotspots.

WAIT TIME IMPACT

Higher wait times can negatively impact customer satisfaction and overall ride experience.

Recommendations

Predictive Demand Scheduling

Use historical ride and location data to forecast peak demand and proactively position drivers, reducing wait times and cancellations while increasing ride completion rates.

Personalized Driver Incentives

Reward drivers for servicing high-demand areas and maintaining high ratings, motivating optimal coverage and improving customer satisfaction.

Thank you
